# STUDY OF LAN CONFIGURATION

## AIM :-

TO design, set up, & configure a Local Area Network (LAN) connecting four computers through a network switch, assign static IP addresses to all devices.

## EQUIPMENTS REQUIRED :-

| S.No | Equipment | Quantity | Specifications. |
|---|---|---|---|
| 1) | Personal computers (PC) | 4 | Ethernet (NIC) enabled. |
| 2) | Network switch | 1 | 8/16/24 port, unmanaged / managed |
| 3) | Ethernet cables (Cat5e/Cat6) | 4 | Straight - through, RJ-45 connectors. |

## IMPLEMENTATION IN CISCO PACKET TRACKER :-

Step-1 : Place the Devices

1) Open Cisco packet Tracer
2) From the device category panel, select End Devices & drag 4 PCs onto the workspace.
3) Select switches & drag 1 switch onto the workspace.

Step-2 : Cable the Devices

4) Click Connections → Select Copper Straight-Through Cable.

5) Click each PC, then click the switch, & select an available FastEthernet port to complete each connection.

6) Repeat for all four PCs (ports Fa0/1 to Fa0/4). Green link lights confirm a successful physical connection.

Step-3 : Assign IP Addresses to PCs

7) Click a PC → Desktop tab → IP configuration

8) Enter the static IP Address & Subnet Mask as per the IP table for each PC.

Step-4 : Configure the switch Management IP

9) Click the switch → CLI tab.

10) Enter the following commands to assign a management IP :

```
enable
configure terminal
interface vlan 1
ip address 10.1.1.5 255.0.0.0
no shutdown
exit
```

Step-5 : Verify connectivity using ping

11) Click a PC → Desktop tab → command prompt

12) Use the ping command to test connectivity to the other PCs : e.g., ping 10.1.1.2.

13) Successful "Reply from ..." messages confirm connectivity.

Step-6: Demonstrated Data Sharing

14) Add a server device & connect it to the switch.

15) Assign it an IP address via Pcs Desktop → IP configuration tab.

16) Open the server's Services tab & enable the HTTP service.

17) From another PC, open the Web Browser and enter the server's IP address to load the page, conforming successful data transfer across the LAN.

Step-7: Observe Packet Flow in Simulation Mode

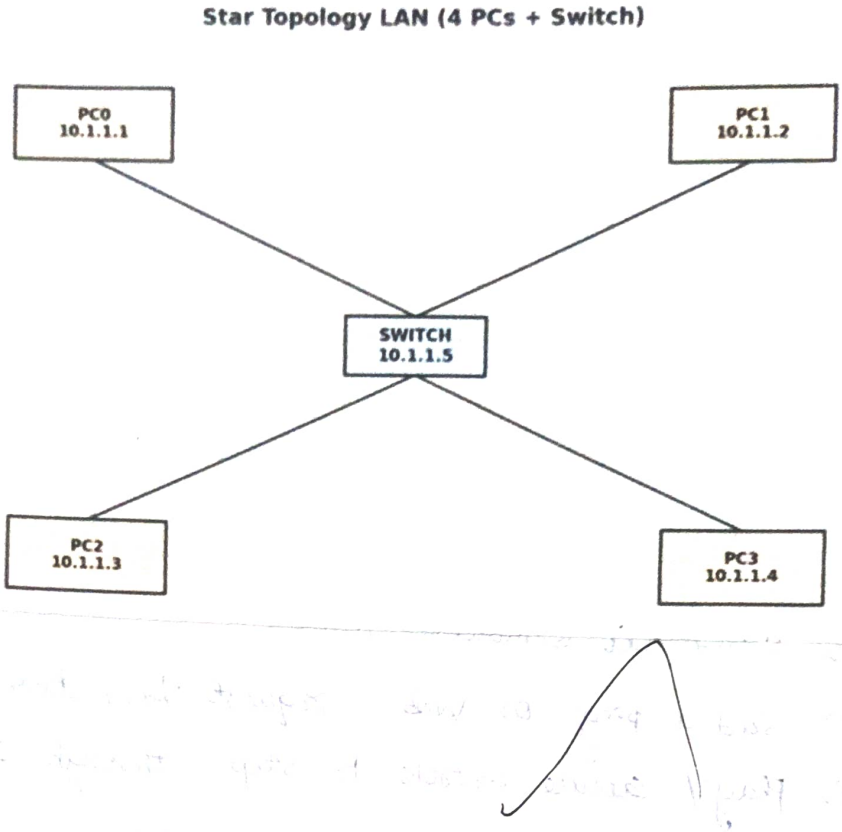

18) Switch to simulation mode.

19) Send a ping or web request b/w two devices & use the play/capture controls to step through the packet as it travels hop-by-hop through the switch, observing MAC-address-based forwarding.

IP ADDRESS CONFIGURATION TABLE :-

| Device | IP Address | Subnet Mask | Connected To |
|---|---|---|---|
| PC0 | 10.1.1.1 | 255.0.0.0 | Switch Port Fa0/1 |
| PC1 | 10.1.1.2 | 255.0.0.0 | Switch port Fa0/2 |
| PC2 | 10.1.1.3 | 255.0.0.0 | Switch port Fa0/3 |
| PC3 | 10.1.1.4 | 255.0.0.0 | Switch port Fa0/4 |
| Switch (Management) | 10.1.1.5 | 255.0.0.0 | VLAN 1 Interface |
